

# Accommodate Both RTI and NCLB without Overwhelming Educators and Students

Discovery Education Assessment provides a single comprehensive assessment solution that satisfies AYP and proficiency requirements as well as IDEA Response to Intervention federal guidelines. Save time and money with Discovery Education Assessment while focusing on the most important thing: **student achievement**.

## What is Response To Intervention (RTI)?

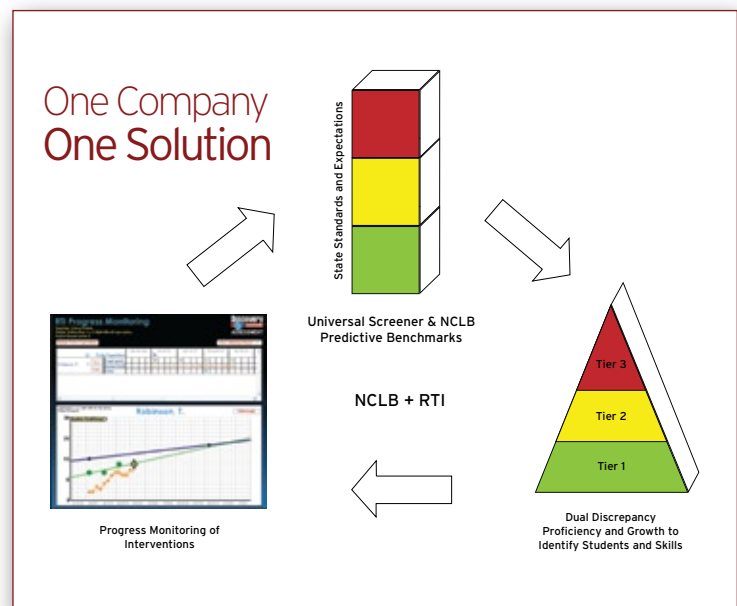

Response To Intervention is a part of the Individuals with Disabilities Education Act (IDEA) of 2004, which ensures services to children with disabilities and outlines how states meet the needs of these children. RTI uses a three tiered approach (either 3 or 4) to identify students who:

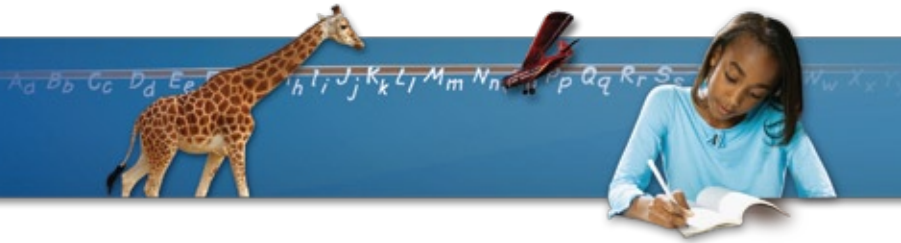

- > Respond accordingly to standard classroom instruction (Tier 1)
- > Require additional interventions to continue in standard classroom instruction (Tier 2)
- > Are not responding to Tier 2 interventions, need more intense interventions, and may require testing for learning disabilities (Tier 3)

The RTI method requires a universal screener taken by all students and frequent measures of progress to determine if students are responding to the interventions.

Discovery Education Assessment solutions provide predictive benchmarks for grades K-HS, as well as online resources and tools that support continuous progress monitoring and encourage 21st century learning. In fact, Discovery Education Assessment is proven to predict performance on high-stakes exams with up to 90% accuracy, giving your educators the information they need to adjust instruction before it is too late.

**Other solutions focus on either NCLB or RTI. No other solution provides both in one.**

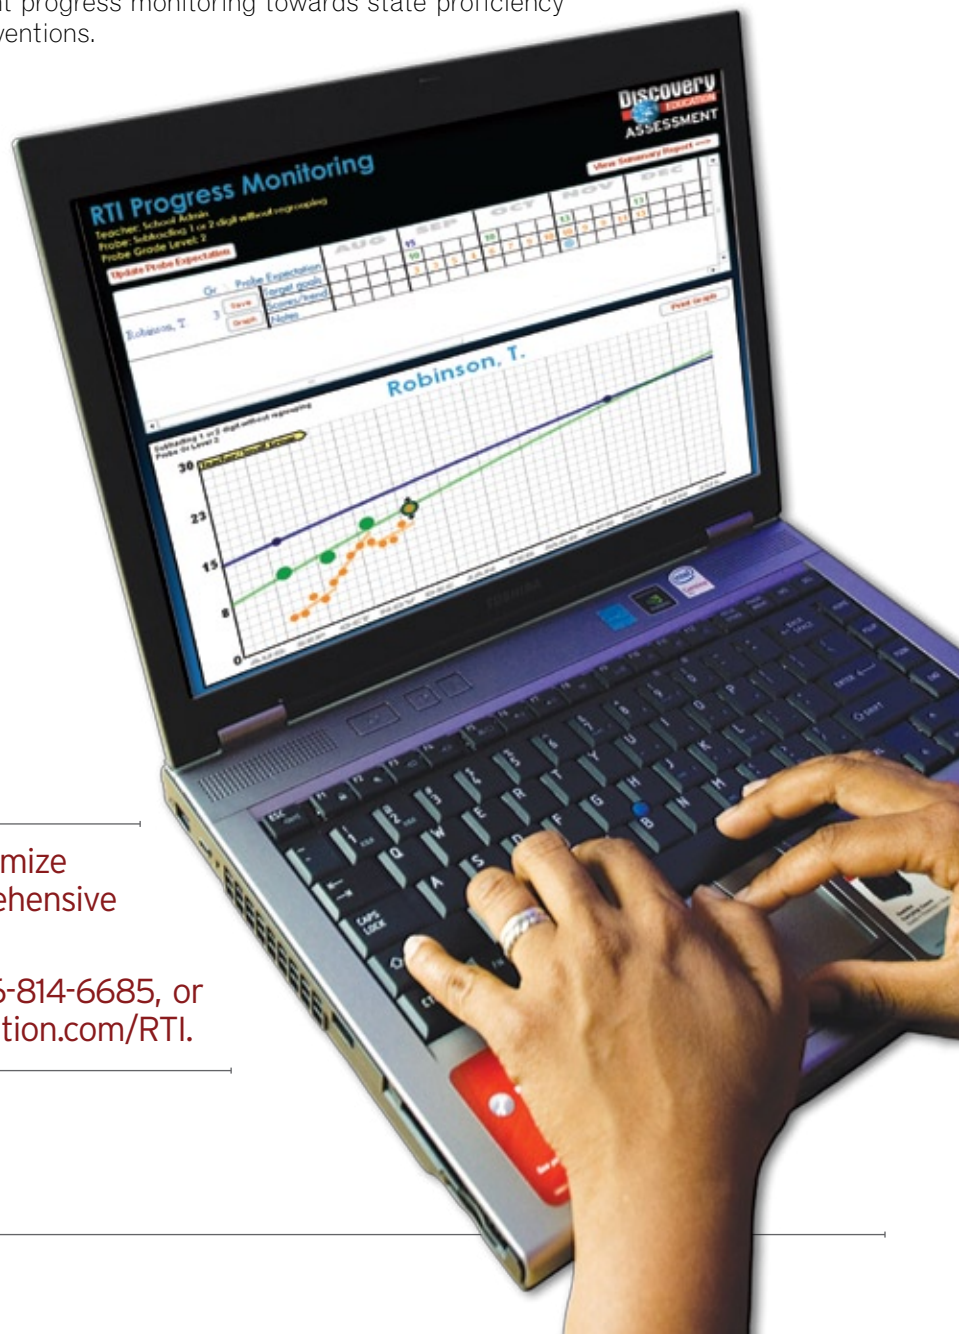

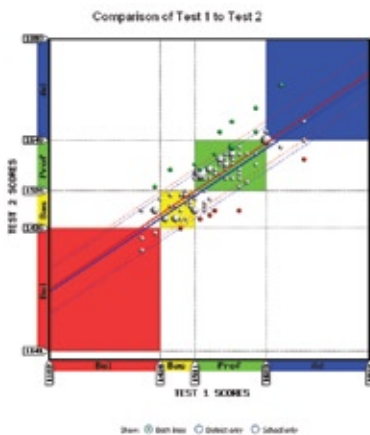

## Seamlessly Integrate RTI into Research-Based Formative Assessment Proven to Improve Student Learning

IDEA 2004 promotes an integrated model designed for all students and teachers, not just special education. A single comprehensive solution is ideal for educators accountable to meet NCLB requirements and also tasked with ensuring students receive the appropriate interventions.

The Discovery Education Assessment RTI solution includes a universal screener and on-going progress monitoring. Periodic, predictive benchmarks screen for tiered intervention and measure student growth. Once students are identified for tiered interventions, teachers monitor student progress using Discovery Education probes or local curriculum-based measures to track the students' response to the instructional interventions.

- Benchmarks serve as both a predictive assessment and universal screener based on your state standards
- Curriculum and fluency probes provide frequent progress monitoring towards state proficiency expectations and a student's response to interventions.
- 80-90% predictor of high stakes exams
- Progress Zone includes Discovery Education streaming videos and over 35,000 items
- Assessments available for Kindergarten through High School
- Easy to use with simple, yet powerful reporting

Save time for your teachers and maximize limited resources with a single comprehensive assessment system.
